

CHIMNEY POTS

AVAILABLE IN STEEL, COPPER AND CLAY

FireRock offers some of the highest quality and reasonably priced chimney pots on the market today. Our chimney pots, which are available in steel, copper and clay, can be installed on both Indoor and Outdoor products and can be used on any fireplace, existing or new install. Not only are chimney pots attractive, but they improve the overall draw of the fireplace, leading to a higher performing fireplace while protecting the chimney from the elements and extreme weather.

STEEL CHIMNEY POTS

Steel chimney pots from FireRock are made of 24-gauge kynar steel, a form of galvanized, pre-colored steel that is as durable as it is attractive. Kynar is a resin-based finish, which not only protects the steel from scratches, but is resistant to the staining, chipping or cracking you find with traditional finishing methods. And because these chimney pots are made of pre-colored steel, they do not require painting or touch ups. These steel chimney pots are available in the styles and colors below.

Compatible with masonry and metal flue systems. Metal flue systems require Adapter Plate (sold separately).
